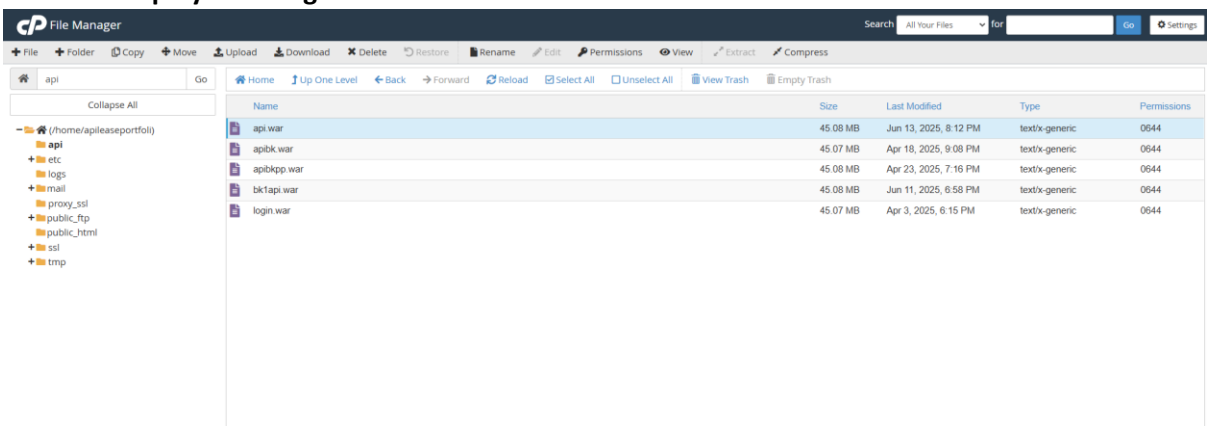
Supporting Evidence

To ensure transparency and verify the integrity of our deployment, we have compiled the following evidence:

a) WAR File Deployment Logs



- **No WAR or API changes** were made after the initial deployment post-VAPT clearance.
- We maintain a version-controlled deployment process.
- We have attached **timestamped screenshots** that show the last modification/upload dates of all .war files on the server.
- This confirms that no backdoor or malicious code was introduced from our end after delivery.

b) Manual File Upload Testing

- To understand how the malicious file reached its location, we tested the file upload module by:
    - Running WAR files **one by one** on the application.
    - Uploading files to trace their **exact storage paths**.
    - We confirmed that the uploaded .php file was stored under:

Swift

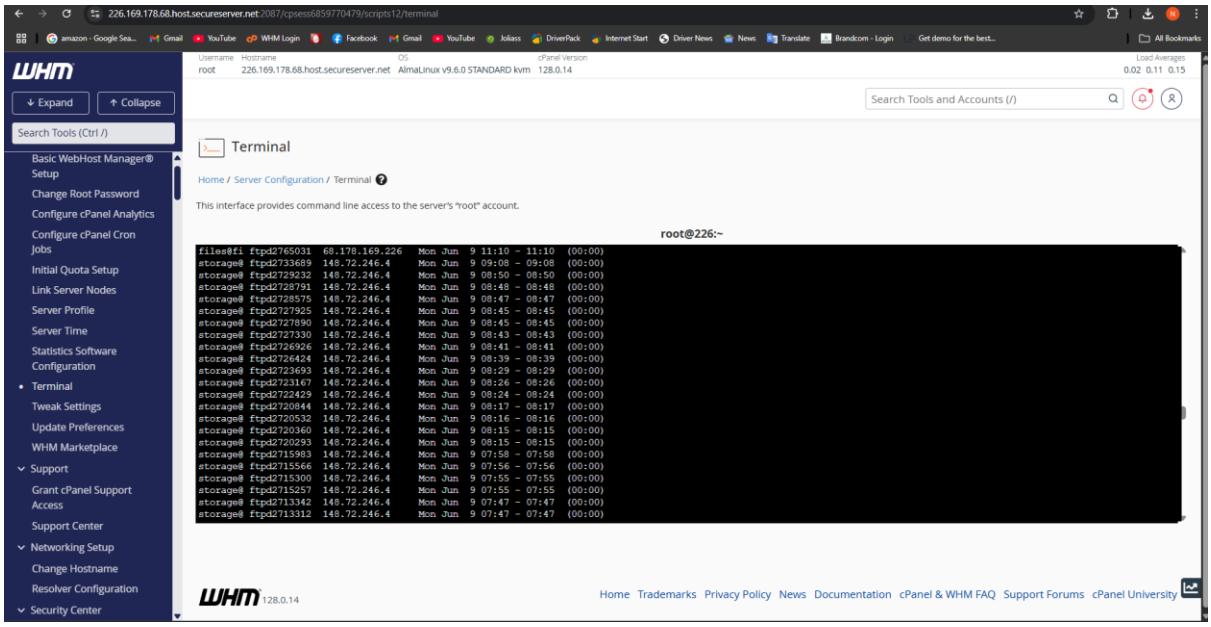
/home/leaseportfolio/public_html/storage/File_Uploads/Portfolio365/Properties/

- The same was accessible publicly via the URL:

bash

https://storage.leaseportfolio365.com/File_Uploads/Portfolio365/Properties/git-third.php

b) Server Access Log Verification



- We extracted the upload-related access logs from 226.169.178.68 ip:

bash

grep upload /usr/local/cpanel/logs/access_log

```

files@fi ftpd869959    68.178.169.226   Wed Jun  4 15:32 - 15:32   (00:00)
```

- The access logs show the timestamp, IP address, and request path related to the upload of the file.
- This log confirms that the upload was done via the application's **file upload feature**, not via server-side tampering or backdoor entry . [4.246.72.148 - 226.169.178.68]

d) Server Details

- Server IP where the shell was discovered:

226.169.178.68

- The uploaded malicious file had full web shell access after reaching the public File_Uploads folder, which was **not restricted** from executing .php files.
